

Customer Data Analysis

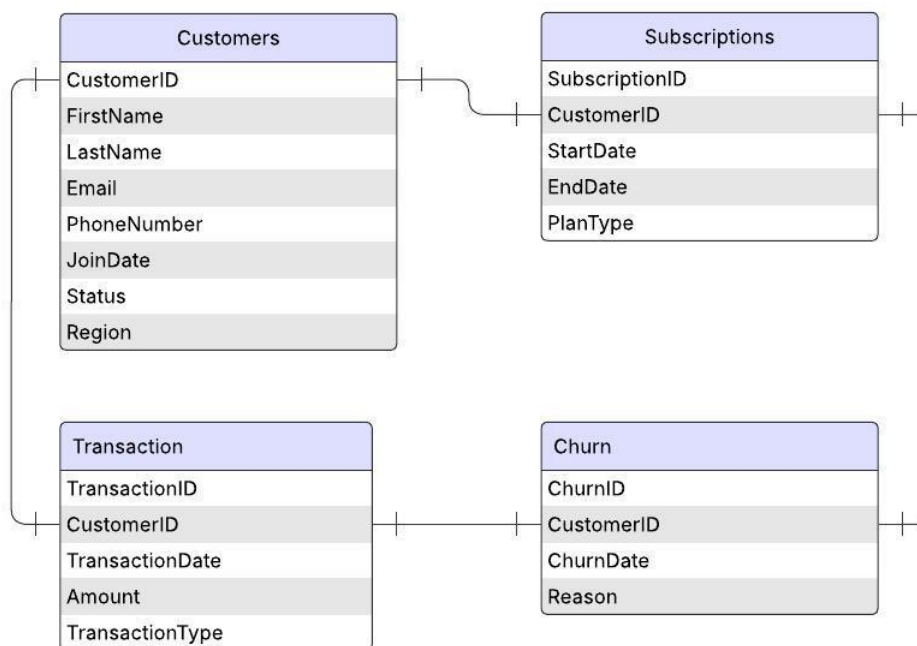

My SQL Project

Objective

- The project goal is to design and implement a relational database that can store customer data, subscription details, transaction history and churn status.
- I have written SQL queries to extract relevant data for analysis. This forms the foundation for the rest of the project.

Tables to create

Customers, Subscriptions, Transactions & Churn data.

Customers

CustomerID (Primary Key,INT)
FirstName (Varchar)
LastName (Varchar)
Email (Varchar)
PhoneNumber (Date)
JoinDate (Date)
Status (Varchar) – Active, Inactive
Region (Varchar)

Customer Data Analysis

Subscriptions

SubscriptionID (Primary Key, INT)
CustomerID (Foreign Key, INT)
StartDate (Date)
EndDate (Date)
PlanType (Varchar)

Transactions

TransactionID (Primary Key, INT)
CustomerID (Foreign Key, INT)
TransactionDate (Varchar)
Amount (Varchar)
TransactionType (Varchar)

Churn

ChurnID (Primary Key, INT)
CustomerID (Foreign Key, INT)
ChurnDate (Date)
Reason (Varchar)

Question Modes:

- Easy – Queries include: SELECT, GROUP BY, ORDER BY, LIMIT, DESC
- Medium – Queries include: JOIN, GROUP BY, ORDER BY, LIMIT
- Advanced – Queries include: CTE (Common Table Expression), RANK

Retrieving Table Insights

```
1 • USE big_basket;  
2  
3 • select * from customers;  
4 • select * from subscriptions;  
5 • select * from transactions;  
6 • select * from churn;  
7
```
